#### Integrated Engineering Solutions

## One Challenge. One Integrated Engineering Solution.

(Need a Visual here)

Sanota helps industries solve operational challenges by bringing together mechanical engineering, electrical systems, automation, IoT, software, implementation and technical support through one coordinated team.

Whether the requirement involves a machine, process, product, digital platform or complete operational system, we help develop a practical way forward.

**Primary Button:** Tell Us Your Challenge

**Secondary Button:** See Sanota in Action

#### Capability Line

Engineering • Automation • IoT • Software • Implementation • Support

#### Chat Prompt

**Not sure where to begin?**

Tell us what is not working—or what you want to achieve. We will help direct your enquiry to the appropriate engineering team.

**Button:** Start Guided Chat (Chat Box)

### 3. Corporate Proof

- **Established in 2010**

Engineering and technology experience developed across changing industrial requirements.

- **1,250+ Client Engagements**

Experience gained through projects, products, services and technical requirements.

- **Multi-Industry Experience**

Engineering solutions developed across diverse operating environments.

- **End-to-End Capability**

Support from initial assessment and design through implementation, AMC and continuous improvement.

### 4. Visitor Pathways

*(These 02 topics to go next to each other)*

## What Brings You to Sanota?

## I Need to Solve a Problem

You do not need to arrive with a completed technical specification.

Tell us about the present situation, what is not working and what you need to achieve. Sanota will help identify the appropriate combination of engineering, automation, digital technology and technical support.

We can help when you need to:

- Improve a production process
- Automate a manual operation
- Modernize an existing machine
- Develop custom machinery
- Introduce monitoring or tracking
- Connect equipment with IoT or software
- Develop a new product or prototype
- Build a processing or production system
- Arrange maintenance or an AMC
- Understand where to begin

**Button:** Tell Us Your Challenge

# I Want to Explore Sanota

Discover the machinery, systems, products and integrated solutions Sanota has developed across industries.

## Explore:

- Completed work
- Project stories
- Machinery demonstrations
- Products and systems
- Videos
- Photo gallery
- Innovation and partnerships
- News and activities

**Button:** See Sanota in Action

## 5. Solution Navigator

### What Are You Trying to Achieve?

#### Modernize a Machine

Restore machinery, replace outdated controls, improve safety and extend operating life.

**Link:** Request a Modernization Assessment

#### Automate a Process

Introduce PLC, HMI, sensor, drive and control technologies to improve consistency and reduce manual intervention.

**Link:** Explore Industrial Automation

#### Develop a Machine

Design and build machinery or equipment around a specific production, processing or testing requirement.

**Link:** Explore Custom Machinery Development

#### Monitor an operation

Connect machines, assets and environments with sensors, IoT, dashboards, alerts and reporting.

**Link:** Explore IoT & Digital Integration

#### Build a Complete System

Develop and integrate machinery, controls, software, utilities and operational processes as one solution.

**Link:** Explore Project Execution

### **Develop a Product**

Turn a technical requirement, concept or research idea into a prototype or practical product.

**Link:** [Explore Product Development](#)

### **Maintain Critical Assets**

Protect machinery, automation and integrated systems through preventive maintenance, technical support and AMCs.

**Link:** [Request an AMC Assessment](#)

### **I Am Not Sure Yet**

Explain the situation in your own words. Our team will help identify the most appropriate starting point.

**Link:** [Request a Technical Consultation](#)

## **6. Integrated Solution Capability**

### **More Than One Technology. One Connected Solution.**

Industrial problems rarely belong to a single technical discipline.

A production issue may require mechanical changes, electrical controls, automation, sensors, software, installation and ongoing maintenance. Sanota brings these capabilities together through one coordinated solution.

#### **Mechanical Engineering**

Machinery, mechanisms, structures, processing equipment and special-purpose systems.

#### **Electrical & Electronic Engineering**

Control panels, electrical systems, embedded electronics, instruments and device integration.

#### **Automation & Control**

PLCs, HMIs, sensors, actuators, motor controls, drives, servo systems and industrial safety functions.

#### **IoT & Software**

Connected monitoring, cloud platforms, dashboards, mobile applications, alerts, tracking and reporting.

#### **Fabrication & Implementation**

Procurement, fabrication, assembly, installation, integration, testing and commissioning.

#### **AMC & Lifecycle Support**

Preventive maintenance, breakdown support, system health reviews, training, upgrades and continuous improvement.

One coordinated team. One accountable delivery approach. One integrated solution.

**Button:** [Explore Our Services](#)

## 7. Completed Work

### See Sanota in Action

Explore how Sanota combines engineering and technology to solve real operational requirements across industries.

#### Industrial Machinery Modernization

Restoring ageing or non-operational machinery through mechanical improvements, electrical upgrades and modern control systems.

**Link:** [View Modernization Projects](#)

#### Smart Agriculture

Combining environmental monitoring, irrigation, fertigation and digital control to support more efficient cultivation.

**Link:** [View Agriculture Projects](#)

#### Tea Process Automation

Improving tea-processing operations through machinery, environmental monitoring, airflow management and automation.

**Link:** [View Tea Industry Projects](#)

#### Food-Processing Systems

Developing machinery and integrated processing systems for preparation, preservation, handling and value addition.

**Link:** [View Food-Processing Projects](#)

#### IoT & Operational Visibility

Connecting machines, assets and processes with tracking, dashboards, alerts and digital reporting.

**Link:** [View IoT Projects](#)

#### Custom Engineering

Developing specialized machinery, testing equipment, prototypes and products where standard solutions are unsuitable.

**Link:** [View Custom Engineering Projects](#)

**Primary Button:** [Explore Completed Work](#)

## 8. Industries We Support

### Engineering Support Across Industries

Sanota helps organizations improve productivity, reliability, process control, operational visibility, resource efficiency and long-term system performance.

#### Manufacturing & Industrial Automation

Custom machinery, production automation, testing systems, connected monitoring and modernization of industrial equipment.

**Link:** [Explore Manufacturing Solutions](#)

#### Smart Agriculture & Agri-Technology

Greenhouses, irrigation, fertigation, controlled cultivation, environmental automation and crop-monitoring systems.

**Link:** [Explore Smart Agriculture](#)

#### Food & Beverage Processing

Equipment and integrated systems for preparation, drying, preservation, cooking, handling and packaging.

**Link:** [Explore Food-Processing Solutions](#)

#### Tea Industry Solutions

Tea-processing machinery, withering systems, dryers, environmental control, factory modernization and digital platforms.

**Link:** [Explore Tea Industry Solutions](#)

#### Additional Industries

- Logistics, Warehousing & Material Handling
- Energy & Resource Efficiency
- Environmental & Waste Solutions
- Infrastructure & Smart Facilities
- Healthcare & Biomedical Engineering
- Research, Innovation & Custom Product Development

**Button:** [View All Industries](#)

## 9. Products and Systems

### Developed Around Real Operational Requirements

Sanota develops standard, configurable and custom-engineered products and systems for specific industrial applications.

#### Industrial Machinery & Automation

Custom machinery, machine controls, testing equipment and special-purpose production systems.

### **Food & Tea Processing**

Dryers, processing equipment, handling systems and integrated production solutions.

### **Smart Agriculture Systems**

Greenhouse, irrigation, fertigation, cultivation and environmental-monitoring systems.

### **IoT, Tracking & Digital Platforms**

Asset tracking, machine monitoring, inspection systems, smart weighing, dashboards and alerts.

### **Material-Handling Systems**

Automated guided vehicles, conveyors, unloading equipment and customized internal-logistics solutions.

### **Energy & Environmental Systems**

Smart energy, solar thermal, waste processing, drainage monitoring and environmental solutions.

Our products and systems can be supported through consultation, customization, installation, commissioning, training and AMC services.

**Button:** Explore Products & Systems

## **10. How Sanota Works**

### **From Requirement to Working Solution**

#### **1. Understand**

We listen to the customer and understand the operation, challenge and expected result.

#### **2. Assess**

We study the process, machinery, site conditions, limitations and available opportunities.

#### **3. Design**

We develop the engineering concept, system architecture and implementation approach.

#### **4. Integrate**

We coordinate mechanical, electrical, automation, IoT and software components.

## **5. Implement**

We build, install, test, commission and hand over the completed solution.

## **6. Support**

We provide training, maintenance, AMC, upgrades and continuing performance improvement.

**Button:** [Start a Discussion](#)

# **11. Why Sanota**

## **One Accountable Engineering Partner**

### **Integrated In-House Capability**

The resources required for engineering, automation, IoT, software and implementation are coordinated within the Sanota solution environment.

### **Practical Engineering**

Solutions are developed around real operating conditions, customer priorities and implementation requirements.

### **Custom Development**

We can develop solutions for requirements that cannot be adequately addressed by standard products.

### **Modernization Expertise**

Existing machinery and systems can often be restored, upgraded and connected before replacement becomes necessary.

### **End-to-End Delivery**

Sanota can remain involved from assessment and design through commissioning and lifecycle support.

### **Multi-Industry Understanding**

Experience across different industries allows relevant technologies and ideas to be adapted to new operational environments.

**Button:** [About Sanota](#)

## 12. AMC and Lifecycle Support

### Keep Critical Systems Operating Reliably

Sanota provides Annual Maintenance Contracts and technical support for machinery, automation and integrated systems developed by Sanota.

We can also take over eligible third-party machinery and systems following an initial technical and condition assessment.

#### AMC Services May Include

- 
- Asset and condition assessment
- Preventive-maintenance planning
- Scheduled mechanical and electrical servicing
- PLC, HMI and control-system support
- Sensor and instrument checks
- Calibration and functional testing
- Breakdown diagnosis and corrective support
- Control-program and system backups
- Spare-parts planning
- Asset-health and maintenance reports
- Safety and performance observations
- Retrofit and upgrade recommendations
- Operator and maintenance-team training

Each AMC is developed according to the equipment, operating environment, asset criticality and required response level.

**Primary Button:** Request an AMC Assessment

**Secondary Button:** Explore Maintenance Services

## 13. Sanota and Knoweb

### Engineering Connected by Digital Technology

Sanota's integrated engineering capability is supported by Knoweb, an affiliated information technology company under common ownership.

Knoweb contributes expertise in software development, IoT connectivity, cloud platforms, web and mobile applications, dashboards, enterprise systems and data management. Together, these capabilities enable physical machinery and operational systems to be connected with:

- Sensors and data acquisition
- Cloud connectivity
- Web and mobile access
- Operational dashboards
- Alerts and notifications

- Tracking and traceability
- Digital records and reporting
- Remote monitoring and control
- Business and enterprise systems

**Button:** Explore Automation, IoT & Digital Integration

## 15. Innovation and Partnerships

### From Ideas to Practical Engineering

Sanota works with businesses, inventors, universities, research institutions and technology partners to develop solutions for specialized and emerging requirements.

Our collaborative capabilities include:

- Feasibility assessment
- Concept development
- Prototype design
- Mechanical and electronic engineering
- Embedded systems
- Automation and control
- IoT and software integration
- Testing and design improvement
- Pilot systems
- Production engineering
- Commercialization support

**Button:** Explore a Collaboration

## 16. Final Call to Action

### Tell Us What Is Not Working—or What You Want to Achieve.

You do not need to know the exact technical solution.

Describe the present situation, the challenge and the result you need. Sanota will review your requirement and guide you towards the appropriate engineering, automation, digital, implementation or maintenance pathway.

**Primary Button:** Tell Us Your Challenge

**Secondary Button:** Contact Sanota

Industries | Services | Products & Systems | Media | About | Insights | Contact

## HERO SECTION

### Tell Us Your Challenge

**You do not need to know the technical solution. Start by telling us what you need to achieve.**

Whether you need to improve a machine, automate a process, develop a new system, introduce IoT and software, or arrange long-term maintenance support, Sanota can help you identify the right way forward.

Our team will review your requirement and connect the necessary engineering, automation, digital and technical-support capabilities around it.

**Primary button:** Start Your Enquiry

**Secondary button:** Speak to Sanota

### Supporting line

Engineering • Automation • IoT • Software • Implementation • Lifecycle Support

## GUIDED ENQUIRY

### Step 1 — What would you like help with?

Select the option that most closely matches your requirement. You may select more than one.

#### Modernize or Repair a Machine

Improve the reliability, productivity, safety or performance of existing machinery.

#### Automate a Process

Reduce manual work, improve consistency or introduce automated control into an operation.

#### Develop a New Machine

Design and build machinery or equipment around a specific production or operational requirement.

**Develop a Complete System**

Create or integrate a production line, processing system, facility solution or multi-technology project.

**Introduce IoT or Digital Monitoring**

Connect machinery, equipment or facilities to sensors, dashboards, alerts, reports or software applications.

**Develop a Product or Prototype**

Transform an idea or operational requirement into a designed, tested and practical product.

**Arrange AMC or Maintenance Support**

Obtain planned maintenance and technical support for Sanota-built or eligible third-party systems.

**Request Engineering Consultation**

Discuss an operational concern, opportunity or concept when the appropriate solution is not yet clear.

**Button:** Continue

**Helper message**

Not sure which option to select? Choose **Request Engineering Consultation**, and our team will help define the requirement.

## **STEP 2 — TELL US ABOUT THE REQUIREMENT**

**What is happening now?**

Briefly describe the current situation, problem or opportunity.

**Field label:** Current situation or challenge

**Placeholder text:** For example: “This process is currently completed manually and causes production delays.”

**What would you like to achieve?**

Tell us what should work better, differently or more efficiently.

**Field label:** Desired outcome

**Placeholder text:** For example: “We want to automate the process, reduce handling time and monitor production.”

**Which industry or sector is this related to?**

**Options**

- Manufacturing

- Agriculture
- Food and beverage processing
- Tea
- Logistics or warehousing
- Energy or resource management
- Environmental or waste management
- Infrastructure or facilities
- Healthcare or biomedical
- Research or product development
- Other

### **Where is the requirement located?**

**Field label:** Project location

**Placeholder text:** City, district and country

### **How urgent is the requirement?**

#### **Options**

- Immediate operational issue
- Required within one month
- Required within three months
- Planned future project
- Timeline not yet decided

### **CONDITIONAL QUESTIONS**

The following questions should appear only when relevant to the visitor's selected requirement.

### **If "Modernize or Repair a Machine" is selected**

#### **What type of machine or equipment is involved?**

#### **What problem are you experiencing?**

- Frequent breakdowns
- Reduced performance
- Obsolete controls or components
- Safety concerns
- High energy or operating cost
- Spare-parts difficulty
- Need for increased capacity
- Other

#### **Is the machine currently operating?**

- Yes
- Operating with limitations
- No
- Not sure

**If “Automate a Process” is selected**

**Which process would you like to automate?**

**How is the process currently completed?**

- Fully manual
- Partly automated
- Existing automation requires improvement
- New process
- Not sure

**What is the main expected improvement?**

- Higher productivity
- Better consistency
- Reduced manual handling
- Improved safety
- Reduced waste
- Better monitoring and reporting
- Other

**If “Develop a New Machine” is selected**

**What should the machine do?**

**What material or product will it handle?**

**Do you have an existing concept, drawing or reference?**

- Yes
- No
- Partly developed

**If “Develop a Complete System” is selected**

**What type of system or facility is required?**

**Which capabilities may be involved?**

- Mechanical engineering
- Electrical engineering
- Automation and controls
- IoT and monitoring
- Software
- Fabrication
- Installation and commissioning
- Maintenance support
- Not sure

**If “Introduce IoT or Digital Monitoring” is selected**

**What would you like to monitor or control?**

- Machinery
- Production
- Energy or utilities
- Temperature or environment
- Agricultural conditions
- Location or movement
- Equipment condition
- Another operational parameter

**How would you like to access the information?**

- Web dashboard
- Mobile application
- Alerts and notifications
- Automated reports
- Integration with an existing system
- Not sure

**If “Develop a Product or Prototype” is selected**  
**Briefly describe the idea or product requirement.**

**What stage has the project reached?**

- Initial idea
- Concept developed
- Drawings or design available
- Prototype available
- Existing product requires improvement
- Not sure

**If “Arrange AMC or Maintenance Support” is selected**

**What requires maintenance support?**

- Machinery
- Automation or control system
- Electrical system
- IoT or monitoring system
- Software system
- Integrated facility or production system
- Multiple assets

**Who originally developed or supplied the system?**

- Sanota
- Another supplier
- Multiple suppliers
- Not known

**Preferred support arrangement**

- Preventive maintenance
- Breakdown support

- Periodic inspections
- Performance monitoring
- Spare-parts and obsolescence support
- Complete AMC
- Assessment required before deciding

### **Important note**

AMC support for third-party systems is offered following an initial technical assessment.  
(Need to highlight this)

## **STEP 3 — SUPPORTING INFORMATION**

### **Help Us Understand the Requirement**

You may upload photographs, videos, drawings, equipment information, reports or other documents that will help our team understand the requirement.

**Upload button:** Add Files

#### **Supporting text**

Accepted file types: JPG, PNG, PDF, DOCX, XLSX and MP4.

Please do not upload passwords, access credentials or documents that you are not authorized to share.

**Optional field:** Equipment make, model or reference number

**Optional field:** Existing supplier or system information

**Optional field:** Estimated number of machines, assets or locations

## **STEP 4 — YOUR CONTACT INFORMATION**

### **How Can We Contact You?**

**Full name**

**Company or organization**

**Job title**

**Email address**

**Telephone number**

**Preferred contact method**

- Telephone call
- Email
- Online meeting
- Site visit discussion
- No preference

**Preferred contact time**

- Morning
- Afternoon
- Evening
- Any time during business hours

**STEP 5 — REVIEW AND SUBMIT****Review Your Enquiry**

Please review the information before submitting it to Sanota.

**Consent statement**

I confirm that the information submitted is accurate to the best of my knowledge and that I am authorized to share the attached material.

I understand that submitting this enquiry does not create a contractual obligation. Sanota may request further information or conduct an assessment before recommending a solution.

**Primary button:** Submit My Challenge

**Secondary button:** Save and Continue Later

**Privacy link:** View Privacy Notice

**WHAT HAPPENS NEXT?****A Practical Review by the Right Team****1. We Review Your Requirement**

Your enquiry will be reviewed to understand the operational need and the technical capabilities that may be required.

**2. We Connect the Right Specialists**

Sanota will direct the enquiry to the appropriate engineering, automation, IoT, software, project or maintenance team.

**3. We Contact You**

A representative will contact you to clarify the requirement and agree on the next step.

**4. We Assess the Opportunity**

Depending on the requirement, the next step may be an online discussion, document review, site visit or technical assessment.

**5. We Recommend a Way Forward**

Following the initial assessment, Sanota will propose the appropriate approach, scope or development pathway.

### Reassurance statement

Every requirement is different. Sanota will not recommend a standard solution before understanding the operational challenge.

## ALTERNATIVE CONTACT OPTIONS

### Prefer to Speak to Someone Directly?

You may contact Sanota using the method most convenient for you.

**Button:** Request a Call

**Button:** Send an Email

**Button:** Contact Sanota

### Supporting line

For urgent operational matters, please identify the enquiry as **Urgent Technical Support** when contacting us.

## FINAL CALL TO ACTION

### Start With the Challenge. We Will Help Define the Solution.

From machinery and automation to IoT, software, implementation and lifecycle support, Sanota brings the necessary capabilities together around your requirement.

**Primary button:** Tell Us Your Challenge

**Secondary button:** Explore Sanota's Capabilities

## SUBMISSION CONFIRMATION

## Thank You. Your Enquiry Has Been Received.

Your reference number is **[Enquiry Reference]**.

The Sanota team will review the information and direct it to the appropriate technical team. A representative will contact you using your preferred contact method.

**Button:** Return to Homepage

**Button:** Explore Completed Work

### Confirmation email subject

Sanota Has Received Your Engineering Enquiry — **[Enquiry Reference]**

### Confirmation email message

Thank you for contacting Sanota.

We have received your enquiry and assigned the reference **[Enquiry Reference]**.

Our team will review the information provided and connect the requirement with the appropriate engineering, automation, IoT, software, project or maintenance specialists.

If additional information is required, a Sanota representative will contact you.

Please quote the enquiry reference in any further communication regarding this requirement.

Sanota  
Integrated Engineering Solutions

## VALIDATION AND SYSTEM MESSAGES

### Required field message

Please complete this field before continuing.

### Contact information message

Please provide at least one valid contact method.

### Upload error message

The file could not be uploaded. Please check the file type and size and try again.

### Connection error message

Your enquiry could not be submitted because of a connection problem. Your entered information has been retained. Please try again.

### Saved enquiry message

Your enquiry has been saved. Use the secure link sent to your email address to continue later.

## INTERNAL ENQUIRY ROUTING

### HERO SECTION

## Integrated Services for Real Operational Challenges

**From problem analysis and engineering design to implementation, automation and long-term support.**

Sanota helps industries solve technical and operational challenges through coordinated engineering and technology services.

Depending on the requirement, a solution may combine mechanical engineering, electrical and electronic systems, automation, IoT, software, fabrication, installation, commissioning and lifecycle support.

**Primary button:** Tell Us Your Challenge

**Secondary button:** Explore Our Services

#### Supporting line

Consult • Design • Develop • Integrate • Implement • Maintain

## INTRODUCTION

### More Than a Single Service

Industrial challenges rarely belong to only one technical discipline.

A machinery problem may require mechanical modifications, new electrical controls, automation, software monitoring and ongoing maintenance. A new product may require concept development, engineering design, prototyping, testing and production support. Sanota brings the required capabilities together around the client's operational need. This provides clients with a more coordinated path from the initial requirement to a practical working solution.

## SERVICE PILLARS

### How Sanota Can Support You

#### 1. Engineering Consultation & Problem Analysis

Every successful solution begins with a clear understanding of the requirement. Sanota works with clients to assess operational problems, technical limitations, improvement opportunities and new project concepts. The objective is to define the actual need before recommending machinery, automation, software or other technologies.

##### Services may include:

- Initial technical consultation
- Operational and process review
- Machinery and system assessment
- Problem and root-cause analysis
- Feasibility evaluation
- Requirement definition
- Solution-concept development
- Preliminary project planning

##### Typical client needs:

- "We know there is a problem, but we are not sure what solution is required."
- "Our current process is inefficient."
- "We want to improve production but need technical guidance."
- "We have an idea that requires engineering evaluation."

**Link:** [Explore Engineering Consultation & Problem Analysis](#)

#### 2. System & Product Design

Sanota develops engineering concepts into clearly defined systems, machinery and product designs.

The design process considers functionality, operating conditions, safety, maintainability, integration requirements and future scalability. Depending on the project, the work may involve mechanical, electrical, electronic, automation, IoT and software design.

**Services may include:**

- Engineering concept development
- Mechanical and electrical design
- System architecture
- Equipment and component selection
- Control-system design
- IoT and software architecture
- Technical drawings and documentation
- Prototype planning
- Design review and improvement

**Typical client needs:**

- “We need a system designed around our operation.”
- “We want to develop a new machine or product.”
- “Our existing concept needs further engineering.”
- “Several technologies must work together as one system.”

**Link:** Explore System & Product Design

### **3. Custom Machinery & Product Development**

When standard equipment does not fully address an operational requirement, Sanota can develop machinery, equipment and products around the client’s specific need.

The service can cover the journey from initial concept and engineering design to fabrication, assembly, testing, installation and improvement.

**Services may include:**

- Custom machinery development
- Special-purpose equipment
- Production and processing equipment
- Product and prototype development
- Mechanical and electrical integration
- Control and automation integration
- Fabrication and assembly
- Testing and validation
- Installation and commissioning
- Product or machine improvement

**Typical client needs:**

- “The machinery available in the market does not meet our requirement.”
- “We need equipment designed for a particular product or process.”
- “We want to convert an idea into a working prototype.”
- “We need to improve or localize an existing machine.”

**Link:** Explore Custom Machinery & Product Development

#### **4. Automation, IoT & Digital Integration**

Sanota helps clients automate operations, connect equipment and gain better visibility over performance.

Solutions can combine industrial automation, sensors, control systems, connectivity, cloud platforms, dashboards, alerts, reports and software applications.

Where software and advanced digital capability are required, Sanota works with Knoweb, an affiliated IT company under common ownership.

**Services may include:**

- Industrial automation
- PLC and control-system development
- HMI and operator interfaces
- Sensor and instrumentation integration
- Machine and process monitoring
- IoT system development
- Cloud-connected platforms
- Web and mobile applications
- Dashboards, alerts and reporting
- Equipment tracking
- Data collection and operational visibility
- Integration with existing systems

**Typical client needs:**

- “We want to reduce manual work.”
- “We need better control over a process.”
- “We want to monitor machinery or facilities remotely.”
- “We need alerts, reports or dashboards.”
- “Our engineering system requires a software component.”

**Link:** [Explore Automation, IoT & Digital Integration](#)

#### **5. Retrofit, Refurbishment & Modernization**

Existing machinery and systems may continue to have operational value even when components, controls or technologies have become outdated.

Sanota assesses existing equipment and develops practical modernization solutions intended to improve reliability, productivity, safety, maintainability or digital visibility.

**Services may include:**

- Machinery condition assessment
- Mechanical refurbishment
- Electrical-system improvement
- Control-system replacement
- PLC and HMI upgrades
- Automation retrofits

- Obsolete-component replacement
- Sensor and instrumentation upgrades
- Safety improvements
- IoT and monitoring additions
- Performance and capacity improvement
- Documentation updates

**Typical client needs:**

- “Our machinery is mechanically useful, but the controls are outdated.”
- “Replacement parts are becoming difficult to obtain.”
- “We want to automate an existing machine.”
- “We need better performance without replacing the complete system.”
- “We want to add monitoring to existing equipment.”

**Link:** Explore Retrofit, Refurbishment & Modernization

## **6. Project Execution, Installation & Commissioning**

Sanota coordinates the practical delivery of engineering and technology solutions from approved design to operational handover.

This service brings together project planning, procurement coordination, fabrication, system integration, installation, testing and commissioning.

**Services may include:**

- Project planning and coordination
- Engineering and technical documentation
- Equipment and component sourcing support
- Fabrication and assembly
- Mechanical installation
- Electrical installation
- Automation and software integration
- Site coordination
- System testing
- Commissioning
- Performance verification
- Operational handover

**Typical client needs:**

- “We require one team to coordinate several technical disciplines.”
- “We need a complete system installed and commissioned.”
- “Our project includes machinery, controls, IoT and software.”
- “We need support from design through to working operation.”

**Link:** Explore Project Execution, Installation & Commissioning

## **7. AMC, Maintenance & Lifecycle Support**

Engineering support should not end when a project is commissioned.

Sanota provides maintenance and lifecycle services intended to protect reliability, reduce avoidable interruptions and identify opportunities for improvement.

Support is available for systems developed by Sanota and for eligible third-party machinery, automation, electrical, control, IoT and software systems following an initial technical assessment.

**Services may include:**

- Annual Maintenance Contracts
- Preventive-maintenance planning
- Periodic inspections
- Breakdown-support arrangements
- Machinery and system servicing
- Automation and control support
- Electrical and electronic support
- IoT and software support
- Service reporting
- Component and obsolescence review
- Performance monitoring
- Modernization recommendations
- Technical lifecycle planning

**Typical client needs:**

- “We need reliable ongoing support after project completion.”
- “Our machinery requires a preventive-maintenance programme.”
- “We need one support arrangement for an integrated system.”
- “We require maintenance support for equipment supplied by another company.”
- “We want to reduce breakdown risk and plan future upgrades.”

**Primary button:** Request an AMC Assessment

**Link:** Explore AMC, Maintenance & Lifecycle Support

## **8. Training & Technical Capability Development**

Sanota helps client teams understand, operate and maintain engineering and technology systems more effectively.

Training can be provided as part of a project handover or as a separate technical-capability programme.

**Services may include:**

- Equipment operation training
- Automation and control-system familiarization
- IoT and software-user training
- Basic maintenance guidance
- Safety and operating-procedure support
- Technical documentation
- System-administration guidance

- Customized technical workshops
- Train-the-trainer programmes
- Post-commissioning refresher training

**Typical client needs:**

- “Our operators need to understand a new system.”
- “Our maintenance team needs equipment-specific guidance.”
- “We need structured training as part of project handover.”
- “We want to strengthen our internal technical capability.”

**Link:** Explore Training & Technical Capability Development

## **INTEGRATED SERVICE MODEL**

### **One Requirement May Use Several Sanota Services**

A client does not need to decide which technical departments should be involved. Sanota first studies the requirement and then identifies the appropriate combination of services.

#### **Modernizing an Existing Machine**

Consultation and assessment

- Mechanical and electrical redesign
- Automation and control upgrade
- IoT monitoring
- Installation and commissioning
- AMC and lifecycle support

#### **Developing a New Product**

Requirement definition

- Engineering and product design
- Prototype development
- Electronics and software integration
- Testing and improvement
- Production-development support

#### **Automating an Industrial Process**

Process analysis

- Automation design
- Machinery and controls integration
- Dashboard or software development
- Installation and commissioning
- Training and ongoing support

**Primary button:** Tell Us Your Challenge

## HOW TO ENGAGE SANOTA

### Start With the Operational Need

#### 1. Tell Us the Challenge

Explain what is not working, what needs improvement or what you want to develop.

#### 2. Initial Technical Review

Sanota reviews the requirement and identifies the relevant capabilities and specialists.

#### 3. Consultation or Assessment

The next step may include a discussion, document review, site visit or technical inspection.

#### 4. Recommended Approach

Sanota defines the proposed solution pathway, scope and implementation requirements.

#### 5. Design and Delivery

Following agreement, the solution moves through design, development, integration, implementation and commissioning.

#### 6. Continued Support

Training, maintenance, AMC and future modernization support can be provided where required.

### Supporting statement

You do not need to prepare a complete technical specification before contacting Sanota. Begin with the problem or desired outcome.

## INDUSTRIES SUPPORTED

### Services Shaped Around Different Operating Environments

Sanota's services can support requirements across:

- Manufacturing and industrial automation
- Smart agriculture and agri-technology
- Food and beverage processing
- Tea
- Logistics, warehousing and material handling
- Energy and resource efficiency
- Environmental and waste management
- Infrastructure and smart facilities
- Healthcare and biomedical engineering
- Research, innovation and product development

The final solution is developed around the client's actual operating environment, technical requirements and business priorities.

**Button:** Explore Industries

## **SANOTA + KNOWEB**

### **Engineering Strengthened by Software and Digital Capability**

Through its collaboration with Knoweb, Sanota can integrate engineering solutions with software, cloud platforms, IoT applications, web and mobile systems, dashboards and enterprise technologies.

This relationship allows clients to access engineering and digital capability through one coordinated solution environment.

Sanota remains responsible for understanding and coordinating the overall engineering requirement, while Knoweb contributes specialized IT and software capability where required.

**Button:** Explore IoT & Digital Integration

## **WHY WORK WITH SANOTA?**

### **Practical Capability Across the Complete Solution Lifecycle**

- Multi-disciplinary engineering and technology capability
- Solutions designed around real operational requirements
- Experience supporting different industries in Sri Lanka
- Custom machinery, product and system development
- Integration of engineering, automation, IoT and software
- Modernization of existing machinery and systems
- Project execution from design to commissioning
- AMC support for Sanota-built and eligible third-party systems
- Training and long-term technical assistance
- One coordinated point of responsibility

## **COMPLETED WORK**

### **See How Sanota Applies These Services**

Explore examples of machinery development, industrial automation, smart agriculture, IoT integration, process improvement, modernization and technical support.

Each project story demonstrates the challenge, the services brought together and the resulting working solution.

**Primary button:** View Completed Work

**Secondary button:** Visit the Media Centre

### **What Challenge Can We Help You Solve?**

Tell us what is not working, what needs improvement or what you want to develop.

Sanota will review the requirement and guide you towards the appropriate engineering, automation, digital, implementation or maintenance solution.

**Primary button:** Tell Us Your Challenge

**Secondary button:** Contact Sanota

**Closing line**

From operational challenge to integrated engineering solution.

## HERO SECTION

### **Products and Systems Developed Around Real Operational Requirements**

**Machinery, automation, connected technologies and integrated systems designed to solve practical industry needs.**

Sanota develops, integrates and supports engineering products and systems for industrial, agricultural, commercial and infrastructure applications.

Our solutions can combine mechanical engineering, electrical and electronic systems, automation, IoT, software, fabrication, installation and lifecycle support.

**Primary button:** Explore Products & Systems

**Secondary button:** Tell Us Your Requirement

### **Supporting line**

Machinery • Automation • IoT • Software • Integrated Systems

## INTRODUCTION

### **From Individual Equipment to Complete Integrated Solutions**

Some clients require a specific machine or product. Others require a complete operational system involving equipment, controls, sensors, software and implementation.

Sanota supports both.

Depending on the requirement, Sanota can provide:

- An existing or adaptable product concept
- A system configured around the client's operation
- Custom machinery or equipment
- Automation and control integration
- IoT and software-enabled systems
- A complete multi-disciplinary project
- Modernization of existing equipment
- AMC and long-term lifecycle support

The appropriate approach is determined after understanding the client's application, operating environment and expected outcome.

## **PRODUCT AND SYSTEM CATEGORIES**

### **Explore Sanota's Product and System Capabilities**

#### **1. Industrial Machinery & Automation Systems**

Sanota develops and integrates machinery and automation solutions intended to improve productivity, consistency, safety and operational control.

Solutions may involve new machinery, special-purpose equipment, automated stations or the modernization of existing machines.

**Solutions may include:**

- Custom industrial machinery
- Special-purpose machines
- Automated production equipment
- Assembly and handling stations
- Machine-control systems
- PLC-based automation
- HMI and operator-control interfaces
- Sensor and instrumentation systems
- Motor and drive-control systems
- Production monitoring
- Machine safety improvements
- Existing-machine automation
- Control-panel development
- Machinery retrofit and modernization

**Suitable for organizations seeking to:**

- Automate a manual operation
- Improve machine productivity
- Replace outdated controls
- Reduce repetitive handling
- Improve process consistency
- Add monitoring to existing equipment
- Develop machinery for a unique requirement

**Link:** Explore Industrial Machinery & Automation Systems

## **2. Food, Beverage & Tea Processing Systems**

Sanota supports the development, integration and improvement of machinery and systems used in food, beverage and tea-related operations.

Solutions can be developed for individual processing stages or as part of a wider production system.

**Solutions may include:**

- Food-processing machinery
- Beverage-processing equipment
- Tea-processing machinery and systems
- Drying and environmental-control systems
- Mixing and blending equipment
- Filling, feeding and handling systems
- Conveyor and transfer systems
- Temperature and humidity monitoring
- Process automation
- Production-control systems
- Retrofit of existing processing equipment
- IoT-enabled production monitoring
- Custom production-line integration

**Suitable for organizations seeking to:**

- Improve production efficiency
- Automate a processing stage
- Control temperature, humidity or airflow
- Modernize existing machinery
- Improve process visibility
- Develop specialized equipment
- Connect processing systems to digital monitoring

**Link:** Explore Food, Beverage & Tea Processing Systems

### **3. Smart Agriculture Systems**

Sanota develops engineering and technology solutions to support controlled agriculture, efficient resource use and better operational visibility.

These solutions may combine irrigation, fertigation, environmental monitoring, automation, IoT platforms and mobile or web-based access.

**Solutions may include:**

- Smart-greenhouse systems
- Automated irrigation
- Fertigation systems
- Climate and environmental monitoring
- Temperature and humidity control
- Soil and growing-condition monitoring
- Water-level and flow monitoring
- Sensor networks
- Remote equipment control
- Agricultural dashboards
- Alerts and automated reports
- Crop-environment data collection
- Nursery and protected-agriculture systems
- Customized agri-technology solutions

**Suitable for organizations seeking to:**

- Improve the control of growing conditions
- Reduce manual monitoring
- Use water and inputs more efficiently
- Access agricultural information remotely
- Automate irrigation or fertigation
- Develop a controlled-environment project
- Connect agricultural operations through IoT

**Link:** Explore Smart Agriculture Systems

### **4. IoT, Monitoring & Tracking Solutions**

Sanota helps organizations connect machinery, equipment, assets and facilities to digital monitoring and management platforms.

Through its collaboration with Knoweb, Sanota can combine engineering systems with software, cloud platforms, dashboards, web applications and mobile technologies.

**Solutions may include:**

- Industrial IoT systems
- Machine-condition monitoring
- Production monitoring
- Equipment and asset monitoring
- Environmental monitoring
- Energy and utility monitoring
- Temperature and humidity monitoring
- Water-level and flow monitoring
- Location and movement tracking
- Fleet or mobile-asset tracking
- Remote-control systems
- Operational dashboards
- Alert and notification systems
- Automated reporting
- Web and mobile applications
- Cloud-based data platforms
- Integration with existing business systems

**Suitable for organizations seeking to:**

- Monitor operations remotely
- Receive alerts when conditions change
- Collect information from equipment
- Improve operational visibility
- Track assets or movement
- Create digital reports and dashboards
- Connect engineering equipment with software systems

**Link:** [Explore IoT, Monitoring & Tracking Solutions](#)

## **5. Material Handling & Logistics Systems**

Sanota develops and integrates systems intended to improve the movement, handling, storage and tracking of materials and products.

Solutions can range from individual handling equipment to automated and connected logistics systems.

**Solutions may include:**

- Conveyor systems
- Product-transfer systems
- Automated guided vehicles
- Mobile material-handling platforms
- Loading and unloading support equipment
- Sorting and routing systems
- Automated movement controls

- Warehouse-support systems
- Asset and inventory tracking
- Sensor-based movement monitoring
- Custom lifting or positioning equipment
- Integration with production systems
- Retrofit of existing handling equipment

**Suitable for organizations seeking to:**

- Reduce manual material movement
- Improve warehouse efficiency
- Connect production and storage operations
- Track goods or equipment
- Automate repetitive transfer activities
- Develop specialized handling equipment

**Link:** Explore Material Handling & Logistics Systems

## **6. Energy & Resource-Efficiency Solutions**

Sanota supports organizations seeking better visibility and control over the use of energy, water and other operational resources.

Solutions may involve monitoring, control, automation, reporting and improvements to existing machinery or facilities.

**Solutions may include:**

- Energy-monitoring systems
- Electrical-parameter monitoring
- Utility-monitoring dashboards
- Water-level and flow monitoring
- Pump and motor-control systems
- Automated equipment scheduling
- Resource-consumption reporting
- Performance alerts
- Remote monitoring
- Control-system optimization
- Energy-related machinery improvements
- Integration with existing facility systems

**Suitable for organizations seeking to:**

- Understand resource consumption
- Detect unusual operating conditions
- Improve equipment control
- Reduce avoidable resource loss
- Monitor multiple locations
- Support operational and sustainability decisions

**Link:** Explore Energy & Resource-Efficiency Solutions

## **7. Environmental & Waste Solutions**

Sanota develops and integrates engineering systems that support environmental management, waste handling and resource recovery.

The exact solution is designed around the type of material, process, operating conditions and intended outcome.

**Solutions may include:**

- Waste-handling equipment
- Sorting and separation systems
- Material-processing equipment
- Recycling-support machinery
- Organic-waste processing systems
- Composting-related equipment
- Liquid and solid waste monitoring
- Environmental-condition monitoring
- Process automation
- Sensor and control integration
- IoT-based environmental reporting
- Custom resource-recovery systems

**Suitable for organizations seeking to:**

- Improve waste handling
- Introduce sorting or separation
- Automate an environmental process
- Monitor environmental conditions
- Develop specialized recycling equipment
- Convert waste-related concepts into practical systems

**Link:** [Explore Environmental & Waste Solutions](#)

## **8. Custom Products, Prototypes & Integrated Systems**

Some operational challenges cannot be solved using an off-the-shelf product.

Sanota works with clients, innovators and organizations to transform ideas and technical requirements into practical products, prototypes, machinery and complete systems.

**Solutions may include:**

- Engineering-product development
- Prototype development
- Special-purpose equipment
- Custom electronics
- Sensor-enabled products
- Connected products
- IoT devices and systems
- Software-supported engineering products
- Research and development support
- Proof-of-concept development
- Product improvement and redesign
- Testing and validation

- Pilot systems
- Scalable integrated solutions

**Suitable for organizations seeking to:**

- Convert an idea into a working prototype
- Develop a new engineering product
- Improve an existing product
- Add electronics, IoT or software to a product
- Test a concept before wider implementation
- Develop a complete solution involving several technologies

**Link:** Explore Custom Products, Prototypes & Integrated Systems

## **HOW SANOTA CLASSIFIES AN OFFERING**

### **Product, System or Custom Solution?**

#### **Product**

A defined item of machinery, equipment, hardware or software that can be supplied or adapted for an application.

#### **System**

A coordinated combination of products, equipment, controls and technologies working together to achieve an operational outcome.

#### **Custom Solution**

A product or system designed or significantly modified around a client's specific requirement.

#### **Integrated Solution**

A complete response that may combine engineering, machinery, automation, IoT, software, implementation and long-term support.

Sanota will help determine which approach is most appropriate after reviewing the requirement.

## **SELECTED SOLUTION AREAS**

### **Examples of What Sanota Can Develop and Integrate**

- Automated machinery
- Special-purpose equipment
- Processing machinery
- Production and handling systems
- Smart-greenhouse solutions
- Irrigation and fertigation systems
- Environmental-control systems
- Industrial automation systems
- PLC and HMI solutions

- IoT monitoring platforms
- Remote-control systems
- Dashboards and reporting tools
- Asset and location-tracking systems
- Material-handling equipment
- Conveyor systems
- Automated guided vehicles
- Energy and utility monitoring
- Waste-processing equipment
- Sensor-enabled products
- Custom prototypes
- Integrated industrial and facility systems

The final configuration, specifications and scope will depend on the client's application and technical assessment.

## **NEW SYSTEMS AND EXISTING EQUIPMENT**

### **Develop New. Improve Existing. Connect What Already Works.**

Sanota's role is not limited to developing new machinery and systems.

Existing equipment may still have significant operational value but require improved controls, new components, automation, digital monitoring or structured maintenance.

Sanota can assess existing machinery and systems to identify opportunities for:

- Mechanical improvement
- Electrical-system upgrades
- Control replacement
- Automation
- Sensor integration
- IoT connectivity
- Software monitoring
- Safety improvement
- Capacity improvement
- Obsolescence management
- Preventive maintenance
- Long-term lifecycle support

**Button:** Explore Retrofit & Modernization

## **SANOTA + KNOWEB**

### **Engineering Products Connected by Digital Technology**

Modern engineering products increasingly depend on software, connectivity and access to operational information.

Through Knoweb, an affiliated IT company under common ownership, Sanota can strengthen engineering products and systems with:

- IoT platforms

- Cloud connectivity
- Web applications
- Mobile applications
- Dashboards
- Alerts and notifications
- Automated reporting
- Data management
- User-management systems
- Integration with existing software

Sanota coordinates the overall engineering requirement, while Knoweb contributes specialized software and digital capability where required.

**Button:** Explore Automation, IoT & Digital Integration

## **HOW A SOLUTION IS DEVELOPED**

### **From Requirement to Working System**

#### **1. Understand the Requirement**

Sanota studies the operational challenge, intended outcome and working environment.

#### **2. Assess the Application**

Existing equipment, processes, constraints, risks and integration requirements are reviewed.

#### **3. Define the Solution**

The appropriate product, system or custom-development approach is identified.

#### **4. Design and Develop**

Mechanical, electrical, automation, IoT and software elements are developed as required.

#### **5. Integrate and Test**

Components and technologies are assembled, programmed, connected and tested.

#### **6. Install and Commission**

The solution is implemented and verified in the intended operating environment.

#### **7. Train and Support**

Operator guidance, technical documentation, maintenance and AMC support can be provided.

**Primary button:** Tell Us Your Requirement

## **SUPPORT AFTER IMPLEMENTATION**

### **Protecting the Value of the Solution**

Sanota can continue supporting products and systems after installation and commissioning.

Support may include:

- Preventive maintenance
- Periodic inspections

- Breakdown-support arrangements
- Mechanical and electrical servicing
- Automation and control support
- IoT and software support
- Performance reviews
- Component-replacement planning
- Modernization recommendations
- Operator and maintenance training
- Annual Maintenance Contracts

AMC and maintenance support may also be available for eligible third-party machinery and systems following a technical assessment.

**Primary button:** Request an AMC Assessment

**Secondary button:** Explore Lifecycle Support

## INDUSTRIES SERVED

### Products and Systems for Diverse Operating Environments

Sanota's product and system capabilities can support:

- Manufacturing and industrial automation
- Smart agriculture and agri-technology
- Food and beverage processing
- Tea
- Logistics, warehousing and material handling
- Energy and resource efficiency
- Environmental and waste management
- Infrastructure and smart facilities
- Healthcare and biomedical engineering
- Research, innovation and product development

## PROJECT STORIES

### From Challenge to Working Solution

Project Stories provide a closer look at how Sanota approaches complex operational requirements.

Each story follows a simple structure:

#### **The Challenge**

What was not working, what needed improvement or what the client wanted to develop.

#### **The Assessment**

How Sanota studied the operation, equipment, constraints and expected outcome.

#### **The Integrated Solution**

The combination of engineering, automation, IoT, software, fabrication and implementation capabilities applied to the requirement.

#### **The Implementation**

How the solution was developed, installed, integrated, tested and commissioned.

#### **The Outcome**

The practical operational improvement, completed system or new capability created through the project.

#### **Continued Support**

Maintenance, AMC, training, modernization or technical assistance provided after implementation.

## **MEDIA PUBLICATION PRINCIPLES**

### **Authentic Work. Clear Information. Responsible Publication.**

Sanota's media content should prioritize:

- Authentic project and product imagery
- Real engineering and implementation activities
- Clear explanations of the client requirement and Sanota's role
- Accurate technical descriptions
- Observable outcomes
- Appropriate client and partner approvals
- Protection of confidential information
- Safe and professional working practices

Generic stock imagery should only be used where authentic Sanota material is temporarily unavailable and should not be presented as completed Sanota work.

## **DISCUSS A SIMILAR REQUIREMENT**

### **Have You Seen a Project Relevant to Your Operation?**

Your requirement may not be identical, but the engineering capabilities may be adaptable to your application.

Tell Sanota:

- Which project or solution interested you
- What you currently operate
- What you want to improve or develop
- Which result you are trying to achieve

Our team will review the requirement and guide you towards the appropriate solution pathway.

**Primary button:** Discuss a Similar Requirement

**Secondary button:** Tell Us Your Challenge

## **MEDIA ENQUIRIES**

### **Media, Partnership or Publication Enquiry**

For enquiries relating to project features, technical articles, exhibitions, partnerships, interviews or permission to use Sanota media, please contact the Sanota team.

**Primary button:** Submit a Media Enquiry

**Secondary button:** Contact Sanota

## **FINAL CALL TO ACTION**

### **See What Sanota Has Done. Imagine What We Can Develop With You.**

From machinery and industrial automation to smart agriculture, IoT, software and lifecycle support, Sanota brings multiple capabilities together to solve practical operational challenges.

## CONTACT SANOTA PAGE

**Page title:** Contact Sanota | Engineering, Project & Technical Enquiries

**Meta description:** Contact Sanota for engineering solutions, machinery, automation, IoT, software, project execution, modernization, AMC and technical-support enquiries.

### HEADER

#### Navigation

Industries | Services | Products & Systems | Media | About | Insights | Contact

#### Primary button

Tell Us Your Challenge

### HERO SECTION

#### Let's Discuss Your Requirement

**Contact Sanota about an operational challenge, engineering project, new system, modernization requirement or long-term technical support.**

You do not need to prepare a complete technical specification before contacting us. Tell us what is happening now, what needs improvement or what you want to develop.

Sanota will review your enquiry and connect you with the appropriate engineering, automation, IoT, software, project or maintenance team.

**Primary button:** Tell Us Your Challenge

**Secondary button:** Request a Call

#### Supporting line

Engineering • Automation • IoT • Software • Project Execution • AMC

### CONTACT OPTIONS

#### Choose the Right Contact Route

##### Engineering & Project Enquiries

Contact us about machinery, automation, new systems, engineering design, product development, modernization or integrated project requirements.

**Button:** Submit an Engineering Enquiry

##### AMC & Maintenance Enquiries

Request an assessment for preventive maintenance, technical support or an Annual Maintenance Contract.

AMC services may cover Sanota-built systems and eligible third-party machinery, electrical, control, automation, IoT and software systems following an initial assessment.

**Button:** Request an AMC Assessment

##### General Enquiries

Contact Sanota regarding company information, administration or enquiries that do not relate to a specific technical requirement.

**Button:** Send a General Enquiry

### **Partnership & Supplier Enquiries**

Contact us regarding technology partnerships, joint development, supplier opportunities, distribution or project collaboration.

**Button:** Submit a Partnership Enquiry

### **Media & Publication Enquiries**

Contact us about exhibitions, interviews, technical articles, project features, media use or company activities.

**Button:** Submit a Media Enquiry

## **DIRECT CONTACT INFORMATION**

## **TECHNICAL ENQUIRY GUIDANCE**

### **Have a Technical or Operational Challenge?**

For engineering requirements, the fastest way to provide the necessary information is through the guided **Tell Us Your Challenge** form.

It will help you explain:

- What is happening now
- What is not working
- What you want to improve
- What you want to develop
- Which equipment or process is involved
- Where the requirement is located
- How urgent the requirement is
- Which supporting files are available

You do not need to identify the technical solution. Sanota will review the requirement and guide you towards the appropriate pathway.

**Primary button:** Tell Us Your Challenge

## **URGENT OPERATIONAL ENQUIRIES**

### **Is an Operational System Currently Affected?**

If your enquiry relates to a current machinery stoppage, production interruption or time-sensitive technical issue, clearly mark it as **Urgent Technical Support**.

Please provide:

- Your name and company
- A telephone number
- Site location
- Equipment or system involved
- Brief description of the issue
- Whether the equipment is currently operating
- Relevant photographs or error information, where available

**Primary button:** Submit Urgent Technical Enquiry

**Secondary button:** Call Technical Support

### **Important notice**

Urgent-enquiry submission does not guarantee immediate attendance or a specific response time. Support availability will depend on the nature of the issue, location, technical requirements and existing service arrangements.

For safety-related situations, follow your organization's approved safety, isolation and emergency procedures before seeking technical assistance.

## **REQUEST A CALL**

### **Ask the Sanota Team to Contact You**

Provide your details and preferred contact time, and a representative will contact you to discuss the requirement.

**Full name**

**Company**

**Telephone number**

**Email address**

**Preferred contact time**

- Morning
- Afternoon
- Any time during business hours

**Brief reason for the call**

**Button:** Request a Call

## **LOCATION**

**Visit Sanota**

**Sanota (Pvt) Ltd**

(Address)

**Map:**

**Directions information:** [Insert any necessary access or appointment information]

Visits should be arranged in advance so that the appropriate representative is available.

**Primary button:** Open in Maps

**Secondary button:** Request an Appointment

## **WHAT HAPPENS NEXT?**

### **A Clear Route from Enquiry to Action**

#### **1. We Receive Your Enquiry**

Your message is recorded and assigned a reference number.

#### **2. We Review the Requirement**

The enquiry is reviewed to identify the relevant industry, service and technical capability.

### **3. We Direct It to the Right Team**

The requirement is assigned to the appropriate engineering, automation, IoT, software, project, maintenance or administrative team.

### **4. We Contact You**

A representative contacts you to clarify the requirement and agree on the next step.

### **5. We Determine the Way Forward**

The next step may involve a discussion, document review, online meeting, site visit or technical assessment.

## **ENQUIRY CONFIRMATION**

### **Thank You for Contacting Sanota**

Your enquiry has been received.

**Reference number:** [Enquiry Reference]

The Sanota team will review the information and direct it to the appropriate department. A representative will contact you using the details provided.

Please quote your enquiry reference in any further communication.

**Primary button:** Return to Homepage

**Secondary button:** Explore Sanota's Work

## **AUTOMATIC CONFIRMATION EMAIL**

### **Email subject**

Sanota Has Received Your Enquiry — [Enquiry Reference]

### **Email message**

Thank you for contacting Sanota.

We have received your enquiry and assigned the reference **[Enquiry Reference]**.

The information will be reviewed and directed to the appropriate Sanota team. If further details are required, a representative will contact you using the information provided.

Please quote the enquiry reference in any future communication relating to this matter.

## HERO SECTION

### Practical Engineering Insights for Evolving Industries

Ideas, technical perspectives and industry knowledge that help organizations make better operational decisions.

Sanota Insights explores the engineering, automation, IoT, software and maintenance considerations behind modern industrial and operational systems.

**Primary button:** Explore Latest Insights

**Secondary button:** Browse by Topic

## INTRODUCTION

### Turning Technical Knowledge into Practical Understanding

Technology continues to change how machinery, production processes, agricultural operations, facilities and resources are managed.

However, adopting technology should begin with a clear operational need—not with technology alone.

Sanota Insights provides practical information to help decision-makers, engineers, technical teams and business leaders better understand operational challenges, evaluate improvement opportunities and prepare for engineering and technology projects.

## **INSIGHT CATEGORIES**

### **Explore by Topic**

#### **Engineering & Industrial Automation**

Understand how machinery, controls, sensors and automation can improve industrial operations.

Topics may include:

- Identifying processes suitable for automation
- Improving production consistency
- Selecting control technologies
- Integrating machinery and automation
- Improving machine safety
- Planning an industrial-automation project
- Avoiding common automation-project mistakes

**Button:** Explore Engineering & Automation

#### **IoT & Digital Transformation**

Learn how connected technologies can create better visibility, control and decision-making.

Topics may include:

- Understanding industrial IoT
- Connecting machinery to dashboards
- Selecting useful operational data
- Remote monitoring and alerts
- Integrating sensors and software
- Cloud-connected engineering systems
- Web and mobile applications for operations
- Protecting operational information

**Button:** Explore IoT & Digital Insights

#### **Machinery Modernization**

Explore how existing machinery can be improved through mechanical, electrical, automation and digital upgrades.

Topics may include:

- When to modernize instead of replace
- Managing obsolete control components

- Adding automation to existing machinery
- Improving machine reliability
- Introducing sensors and monitoring
- Planning a control-system upgrade
- Extending useful equipment life

**Button:** Explore Modernization Insights

## **Smart Agriculture**

Understand how automation, sensors, irrigation, fertigation and digital monitoring can support agricultural operations.

Topics may include:

- Controlled-environment agriculture
- Smart greenhouse systems
- Irrigation and fertigation automation
- Environmental monitoring
- Water-use visibility
- Remote agricultural monitoring
- Selecting practical agri-technology
- Preparing for an agricultural IoT project

**Button:** Explore Smart Agriculture Insights

## **Energy & Resource Efficiency**

Learn how monitoring and control can support the better use of energy, water and operational resources.

Topics may include:

- Understanding where resources are used
- Energy and utility monitoring
- Pump and motor control
- Water-level and flow monitoring
- Detecting unusual operating conditions
- Using dashboards for resource decisions
- Connecting resource efficiency with maintenance

**Button:** Explore Energy & Resource Insights

## **Maintenance & Asset Lifecycle**

Explore practical approaches to reliability, preventive maintenance, AMC and long-term technical support.

Topics may include:

- Preventive versus reactive maintenance
- Preparing an Annual Maintenance Contract
- Assessing third-party machinery for AMC

- Maintenance documentation and reporting
- Managing component obsolescence
- Identifying modernization opportunities
- Planning the lifecycle of integrated systems
- Supporting automation, IoT and software after commissioning

**Button:** Explore Maintenance Insights

## **Product Development & Innovation**

Learn how engineering ideas move from initial concepts to prototypes and practical products.

Topics may include:

- Defining a product requirement
- Preparing for engineering design
- Developing a prototype
- Integrating mechanics, electronics and software
- Testing and validating a concept
- Improving an existing product
- Planning a pilot implementation
- Working with an engineering-development partner

**Button:** Explore Product Development Insights

## **Project Planning & Implementation**

Understand the decisions required to move an engineering concept towards a working solution.

Topics may include:

- Preparing a project requirement
- Defining project scope
- Coordinating multiple technical disciplines
- Planning installation and commissioning
- Managing site and operational constraints
- Preparing teams for system handover
- Training operators and maintenance personnel
- Planning post-project support

**Button:** Explore Project Planning Insights

## **FEATURED INSIGHTS**

### Introduction

Briefly explain the operational or technical issue addressed by the article.

### Why It Matters

Explain why the issue is relevant to the intended industry or decision-maker.

### Key Considerations

Present the important engineering, operational, financial or implementation factors.

### Practical Approach

Explain how an organization can assess the requirement or prepare for the next step.

### Common Challenges

Identify frequently encountered limitations, risks or misunderstandings.

### Questions to Ask

Provide a concise list of questions the reader should consider before making a decision.

### How Sanota Can Help

Connect the topic to the relevant Sanota services, products, systems or assessment process.

### Related Content

Link to relevant industries, services, products, project stories and other insights.

## TECHNICAL GUIDES

### Practical Guides and Checklists

Sanota can provide downloadable resources to help organizations prepare for engineering and technology projects.

Suggested guides include:

- Engineering Requirement Preparation Checklist
- Industrial Automation Readiness Checklist
- Machinery Modernization Assessment Guide
- IoT Project Planning Checklist
- AMC Preparation Checklist
- Product Development Brief
- Site Visit Preparation Checklist
- Installation and Commissioning Readiness Guide

**Primary button:** Explore Technical Guides

#### Supporting note

Downloads may require basic contact information where follow-up assistance is offered. Visitors should be clearly informed before submitting their details.

## ENGINEERING QUESTIONS

### Questions We Frequently Help Clients Answer

- Can an existing machine be automated?

- Should old equipment be modernized or replaced?
- How can production be monitored remotely?
- Can several independent systems be integrated?
- What information is required to develop custom machinery?
- How can sensors and software improve an operation?
- Can Sanota maintain equipment supplied by another company?
- What should be assessed before beginning an IoT project?
- How does an idea become an engineering prototype?
- What support is required after commissioning?

**Button:** Ask Sanota a Question

## **SANOTA + KNOWEB INSIGHTS**

### **Where Engineering Meets Digital Technology**

Through its collaboration with Knoweb, Sanota can provide perspectives covering both physical engineering systems and their digital components.

Topics may include:

- Connecting machinery with software
- Designing useful operational dashboards
- Selecting sensors and communication methods
- Developing web and mobile interfaces
- Managing alerts and reports
- Integrating IoT platforms with existing operations
- Supporting connected systems throughout their lifecycle

**Button:** Explore Engineering & Digital Insights

## **KNOWLEDGE FROM PRACTICAL EXPERIENCE**

### **Insights Informed by Real Operating Requirements**

Sanota's insight content should be developed using practical engineering experience, project learning and relevant industry knowledge.

Every article should aim to:

- Address a real operational question
- Explain technical subjects clearly
- Help readers make better decisions
- Avoid unnecessary jargon
- Identify limitations and important considerations
- Connect knowledge to practical action
- Remain accurate and responsible
- Protect client confidentiality

Where an article refers to standards, regulations, performance figures or external research, the information should be verified and appropriately referenced before publication.

## **CONTENT DISCLAIMER**

### **Important Information**

Sanota Insights provides general information for educational and planning purposes. Engineering requirements differ according to equipment, operating conditions, location, application and applicable standards. Information published in an article should not be treated as a substitute for a site-specific technical assessment, professional design or approved safety procedure. Contact Sanota for advice relating to a specific requirement.

## **ABOUT SANOTA**

### **1. Page Hero**

#### **About Sanota**

**Practical Engineering. Connected Technology. Lasting Operational Value.**

Sanota is an integrated engineering and technology solutions company that helps industries design, develop, automate, modernize, maintain and improve machinery, products, processes and operational systems.

Established in Sri Lanka in 2010, we combine engineering experience, practical implementation and digital technology to develop solutions around real operational requirements.

**Primary Button:** [Discuss Your Requirement](#)

**Secondary Button:** [Explore Our Projects](#)

## 2. Who We Are

### Engineering Solutions Built Around Real Requirements

Sanota (Pvt) Ltd works with organizations to understand operational challenges and develop practical engineering solutions that improve productivity, reliability, safety, visibility and resource efficiency.

Our work brings together multiple technical disciplines, including:

- Mechanical engineering
- Electrical and electronic engineering
- Industrial automation
- PLC, HMI and control systems
- Sensors and instrumentation
- IoT and connected monitoring
- Software and digital platforms
- Machinery fabrication and integration
- Product development
- Retrofit and modernization
- Maintenance and lifecycle support

This integrated capability allows Sanota to take responsibility for more than an individual machine or isolated technology. We consider how the complete system must operate, how it will be implemented and how it can be supported over the long term.

## 3. Our Story

### Developing Engineering Solutions Since 2010

Sanota was founded in 2010 by Mr. Sahan C. Ranasinghe with the objective of identifying real industrial and operational problems and developing practical technical solutions to address them.

Since its establishment, Sanota has expanded its capabilities across machinery development, industrial automation, electronics, IoT, software, product development and integrated engineering systems.

The company has worked across a wide range of sectors, supporting requirements in manufacturing, agriculture, food processing, tea, logistics, energy, environmental management, infrastructure, healthcare and research.

Through more than 1,250 client engagements, Sanota has gained experience in developing new systems, improving existing operations, modernizing ageing machinery and creating specialized solutions for requirements that cannot always be met through standard products.

Today, Sanota continues to strengthen its role as a Sri Lankan engineering and technology company with the capability to support both local and international customers, projects and partnerships.

## **4. What We Do**

### **From Operational Challenge to Engineered Solution**

Customers do not always need to approach Sanota with a completed technical specification.

They may come to us with:

- A production problem
- An inefficient process
- An outdated or unreliable machine
- A requirement to reduce manual work
- A need for better monitoring and control
- A product or machinery concept
- A requirement to improve energy or resource use
- A need for maintenance or technical support
- An opportunity to introduce automation or digital technology

Our role is to study the requirement, understand the operating environment and develop an appropriate engineering response.

Depending on the project, this may involve machinery design, fabrication, electrical systems, automation, sensors, IoT, software, dashboards, installation, commissioning, maintenance or a combination of these capabilities.

**Button:** [Explore Our Services](#)

## **5. Our Integrated Capabilities**

### **One Connected Engineering Approach**

Sanota's principal strength is the ability to coordinate different engineering and technology disciplines within one solution.

#### **Engineering Design**

We develop machinery, mechanical systems, electrical designs, control architectures and integrated technical solutions around customer requirements.

#### **Custom Machinery and Product Development**

We design and develop special-purpose machinery, processing equipment, testing systems, prototypes and customized products.

#### **Industrial Automation**

We integrate PLCs, HMIs, sensors, actuators, motor controls, drives, servo systems and industrial safety functions.

#### **IoT and Digital Integration**

We connect machinery, assets and operating environments to cloud platforms, dashboards, mobile applications, alerts and reporting systems.

### **Retrofit and Modernization**

We restore machinery, replace obsolete control systems, improve safety and introduce automation to extend equipment life and improve performance.

### **Project Implementation**

We support procurement, fabrication, assembly, programming, installation, testing, integration, commissioning, training and handover.

### **AMC and Lifecycle Support**

We provide planned maintenance, technical assistance, breakdown support, system upgrades and Annual Maintenance Contracts for Sanota-built and eligible third-party systems.

## **6. Supporting Sri Lankan Industries**

### **Engineering Progress Across Diverse Sectors**

Sanota has extended engineering and technical support across a broad range of industries in Sri Lanka.

Our work has included:

- Developing machinery for production and processing
- Automating industrial equipment and workflows
- Restoring non-operational and ageing machinery
- Replacing outdated control systems
- Introducing connected monitoring and reporting
- Developing food and agricultural processing equipment
- Supporting tea-processing modernization
- Improving material handling and asset visibility
- Developing waste and environmental solutions
- Supporting technical education and research
- Collaborating on healthcare and specialized products
- Helping customers develop new products and prototypes

Through these activities, Sanota contributes to local engineering development, industrial productivity, technology adoption, value addition and import-substitution opportunities. Our experience across different industries also enables us to transfer relevant knowledge and technologies from one operational environment to another.

**Button:** [Explore Industries](#)

## **7. Our Engineering Approach**

### **Practical Solutions Designed for Implementation**

Sanota approaches every project with an understanding that a successful engineering solution must work reliably within the customer's actual operating environment.

Our approach is guided by five principles.

#### **Understand Before Designing**

We begin by understanding the process, problem, operating conditions, limitations and expected outcome.

#### **Integrate the Complete System**

We consider the relationship between machinery, controls, electrical systems, software, people and operating procedures.

### **Modernize Where Practical**

We evaluate whether existing machinery can be restored, retrofitted or improved before recommending complete replacement.

### **Design for Long-Term Use**

We consider maintainability, operator usability, availability of components, future expansion and lifecycle support.

### **Remain Accountable Through Implementation**

Our involvement can continue from initial assessment and design through development, installation, commissioning, training and maintenance.

## **8. Sanota and Knoweb**

### **Engineering Connected by Digital Technology**

Sanota's integrated engineering capability is supported by Knoweb, an affiliated information technology company under common ownership.

Knoweb contributes specialist expertise in:

- Software development
- IoT connectivity
- Cloud platforms
- Web and mobile applications
- Operational dashboards
- Enterprise systems
- Database development
- Digital reporting
- Remote monitoring and control
- Data and systems integration

This relationship enables Sanota to combine physical engineering systems with digital technologies.

A machine can therefore become part of a connected operational system incorporating sensors, automation, cloud access, dashboards, alerts, traceability and management reporting.

Sanota remains the principal engineering and client-solution partner, while Knoweb strengthens the software and digital components required for connected solutions.

**Button:** Explore Automation, IoT & Digital Integration

## **9. Innovation and Collaboration**

### **Turning Ideas into Practical Solutions**

Sanota works with businesses, inventors, universities, researchers, institutions and technology partners to develop solutions for specialized and emerging requirements.

Our collaborative development capability can include:

- Requirement and feasibility analysis
- Engineering concept development
- Prototype design
- Mechanical and electronic development
- Embedded systems
- Automation and control

- IoT and software integration
- Testing and design improvement
- Pilot systems
- Production engineering
- Technical support for commercialization

This approach allows Sanota to contribute not only as a supplier, but also as an engineering development partner.

**Button:** Explore a Collaboration

## **10.Our Vision**

### **To Advance Industries Through Practical Engineering and Intelligent Technology**

Our vision is to become a trusted engineering and technology partner for industries seeking practical, reliable, sustainable and future-ready operational solutions.

## **11.Our Mission**

Our mission is to understand real operational challenges and deliver integrated engineering solutions that create measurable and long-term value for our customers.

We pursue this mission by:

- Combining engineering and digital capabilities
- Developing solutions around customer requirements
- Supporting modernization and efficient resource use
- Taking responsibility from concept to implementation
- Building long-term customer and technical partnerships
- Supporting innovation and industry development

## **12.What Guides Our Work**

### **Practicality**

Solutions must be suitable for real operating conditions and implementation requirements.

### **Reliability**

Systems must be designed to perform consistently and support long-term operation.

### **Integration**

Engineering, automation and digital technologies should work as one coordinated system.

### **Innovation**

New technologies should be applied where they create meaningful operational value.

### **Responsibility**

We remain focused on the quality, safety, maintainability and performance of the solution.

### **Partnership**

We work closely with customers and collaborators to achieve shared technical and operational objectives.

### **Continuous Improvement**

We support the ongoing optimization, modernization and development of customer operations.

### **13. Why Organizations Work With Sanota**

#### **One Accountable Partner**

Customers can access mechanical engineering, electrical systems, automation, IoT, software and implementation support through one coordinated relationship.

#### **Multi-Industry Experience**

Our work across diverse sectors helps us understand different operating environments and develop adaptable solutions.

#### **Custom Engineering Capability**

We can develop specialized solutions where standard machinery or technology does not fully meet the requirement.

#### **Retrofit and Modernization Expertise**

We help customers extend machinery life, replace obsolete controls and improve existing operations.

#### **Physical and Digital Integration**

We connect machinery and operating systems with monitoring, software, dashboards and data.

#### **End-to-End Delivery**

Our support can cover assessment, design, development, installation, commissioning, training and lifecycle care.

#### **Long-Term Technical Support**

We offer maintenance, Annual Maintenance Contracts, troubleshooting, upgrades and performance-improvement support.

### **14. Sanota at a Glance**

#### **Established in 2010**

Engineering and technology experience developed across changing industrial requirements.

#### **1,250+ Client Engagements**

Experience supporting organizations through products, projects, technical services and engineering requirements.

#### **Multi-Industry Experience**

Solutions developed across manufacturing, agriculture, food processing, tea, logistics, energy, environmental management, infrastructure and healthcare.

#### **Integrated Technical Capability**

Mechanical engineering, electrical and electronic systems, automation, IoT and software working together.

#### **Local Strength with International Potential**

Sri Lankan engineering capability supporting local industries and international customers, projects and partnerships.

#### **Complete Lifecycle Support**

From operational assessment and design through project delivery, AMC and continuous improvement.

### **15. Closing Call to Action**

**Let's Develop the Right Solution for Your Operation**

Whether you are planning a new engineering project, improving a production process, developing a product, modernizing machinery, introducing automation or seeking dependable maintenance support, Sanota can help identify a practical way forward. Tell us about your operational challenge, requirement or opportunity. Our team will connect you with the appropriate engineering and technical expertise.

**Primary Button:** Discuss Your Requirement

**Secondary Button:** Request a Technical Consultation

## INDUSTRIES OVERVIEW PAGE COPY

### 1. Page Hero

#### Industries We Support

##### Integrated Engineering Across Diverse Operational Environments

Sanota helps organizations design, develop, automate, modernize and maintain machinery, processes and operational systems across a wide range of industries.

We combine engineering, automation, IoT and software to develop practical solutions around the requirements of each industry and customer.

**Primary Button:** Select Your Industry

**Secondary Button:** Discuss Your Requirement

### 2. Industry-Focused Engineering

#### Solutions Developed Around How Your Industry Operates

Every industry has different processes, operating conditions and technical priorities. A solution that works in one environment may not be suitable for another.

Sanota begins by understanding the customer's operation, including:

- The process or activity being performed
- Existing machinery and systems
- Production or service requirements
- Operational limitations
- Safety and quality expectations
- Resource and energy use
- Maintenance requirements
- Opportunities for automation and digitalization
- Future expansion plans

We then combine the appropriate engineering and technology capabilities to develop a practical and scalable solution.

### **3. Priority Industries**

#### **Manufacturing & Industrial Automation**

##### **Modernize, Automate and Improve Production**

Sanota helps manufacturers improve production, equipment reliability, safety and process control through custom machinery, industrial automation, connected monitoring and modernization of existing assets.

Our support can include:

- Custom and special-purpose machinery
- Production and process automation
- PLC, HMI, sensor and drive integration
- Automated testing and inspection systems
- Machine monitoring and data collection
- Material-handling systems
- Machinery refurbishment
- Control-system replacement
- Preventive maintenance and AMC support

**Button:** [Explore Manufacturing & Industrial Automation](#)

#### **Smart Agriculture & Agri-Technology**

##### **Engineering Smarter and More Resource-Efficient Agriculture**

Sanota develops controlled-agriculture, automation and monitoring systems that help growers manage water, nutrients, climate and crop conditions with greater precision.

Our support can include:

- Greenhouse engineering and automation
- Irrigation and fertigation systems
- Hydroponic and aquaponic systems
- Soil and coir-based cultivation systems
- Climate and environmental control
- Plant and soil monitoring
- Automated dosing and pumping
- Web and mobile dashboards
- Alerts and remote control
- Maintenance and system support

**Button:** [Explore Smart Agriculture](#)

#### **Food & Beverage Processing**

##### **Turn Raw Materials into Consistent, Market-Ready Products**

Sanota designs food-processing equipment and integrated systems that support better hygiene, process control, preservation, throughput and value addition.

Our support can include:

- Washing and preparation systems
- Cutting and shredding equipment
- Drying and preservation systems
- Cooking and incubation equipment
- Conveyors and product handling
- Processing-line integration
- Automation and safety controls
- Temperature and humidity monitoring
- Packaging-flow support
- Maintenance and AMC services

**Button:** Explore Food & Beverage Processing

## **Tea Industry Solutions**

### **Modern Engineering for Sri Lanka's Tea Value Chain**

Sanota supports tea factories, estates, smallholders and specialty producers with processing machinery, automation, environmental control, digital monitoring and lifecycle support.

Our support can include:

- Withering systems
- Tea rollers
- Green and black tea dryers
- Mini tea-factory systems
- Specialty tea-processing machinery
- Airflow and environmental control
- Automated louver control
- Energy and process monitoring
- Plantation and smallholder software
- Machinery modernization and AMC support

**Button:** Explore Tea Industry Solutions

## **4. Additional Industries**

### **Logistics, Warehousing & Material Handling**

#### **Move Materials Safely, Intelligently and Visibly**

Sanota helps factories, warehouses and distribution operations improve internal material movement, asset visibility and workflow coordination.

Solutions may include automated guided vehicles, conveyors, unloading systems, RFID tracking, operational dashboards and customized material-handling equipment.

**Button:** Explore Logistics & Warehousing Solutions

## **Energy & Resource Efficiency**

### **Measure, Control and Optimize Resources**

Sanota supports industrial, commercial, agricultural and institutional facilities in improving their understanding and control of energy and resource use.

Solutions may include energy monitoring, smart control systems, solar thermal systems, operational analytics, heating-system improvements and resource-efficiency initiatives.

**Button:** Explore Energy & Resource Solutions

## **Environmental & Waste Solutions**

### **Practical Engineering for Cleaner and More Resilient Operations**

Sanota develops machinery and connected systems for waste handling, compaction, processing, environmental monitoring and waterway protection.

Solutions may include bale machines, food-waste processors, smart drain monitoring, waste-interception systems, environmental sensors and operational dashboards.

**Button:** Explore Environmental & Waste Solutions

## **Infrastructure & Smart Facilities**

### **Connect Infrastructure with Intelligent Monitoring and Control**

Sanota integrates automation, communication and monitoring technologies to improve the visibility, coordination, safety and reliability of infrastructure and facilities.

Solutions may include traffic-control systems, utility monitoring, facility automation, alarm integration, environmental monitoring and centralized control platforms.

**Button:** Explore Infrastructure & Smart Facilities

## **Healthcare & Biomedical Engineering**

### **Engineering Support for Healthcare Innovation**

Sanota supports hospitals, researchers, institutions and innovators through customized equipment development and collaborative biomedical engineering.

Our capabilities may include mechanical equipment, electronic devices, control systems, prototypes, monitoring solutions and technical support for eligible healthcare equipment.

**Button:** Explore Healthcare & Biomedical Engineering

## **Research, Innovation & Custom Product Development**

### **From Idea and Research Challenge to Engineered Product**

Sanota works with inventors, universities, research institutions, startups and businesses to translate concepts and difficult technical requirements into practical prototypes, products and operational systems.

Our support may include engineering feasibility, concept development, mechanical and electronic design, embedded systems, automation, IoT, software, testing and production engineering.

**Button:** Explore Innovation & Custom Development

## 5. How Sanota Helps Industries

### Support Across the Complete Engineering Journey

Sanota's support is not limited to supplying a machine or individual technology. Depending on the requirement, we can assist across the complete solution lifecycle.

#### **Assess**

Understand the operation, identify challenges and define improvement opportunities.

#### **Design**

Develop the mechanical, electrical, automation and digital architecture required for the solution.

#### **Develop**

Build machinery, prototypes, control systems, software and connected platforms.

#### **Integrate**

Connect equipment, controls, sensors, software, utilities and operating processes.

#### **Implement**

Install, test, commission and hand over the completed system.

#### **Modernize**

Restore existing machinery, replace obsolete controls and improve system performance.

#### **Maintain**

Provide preventive maintenance, breakdown support, upgrades and Annual Maintenance Contracts.

#### **Improve**

Review performance and identify further opportunities for efficiency, scalability and operational development.

**Button:** [Explore Our Services](#)

## 6. Engineering and Digital Technology Together

### Physical Systems Connected with Intelligent Technology

Modern industries increasingly require machinery, automation and digital systems to work together.

Sanota combines its engineering capabilities with the software and digital expertise of Knoweb, an affiliated IT company under common ownership.

This enables us to develop connected solutions incorporating:

- Industrial machinery
- PLC and HMI control
- Sensors and instrumentation
- IoT connectivity
- Cloud platforms
- Web and mobile applications
- Operational dashboards
- Asset tracking
- Alerts and reporting
- Remote monitoring and control
- Enterprise-system integration

This combination helps customers move from isolated machinery and manual records toward more connected and visible operations.

**Button:** Explore Automation, IoT & Digital Integration

## **7. Modernization Across Industries**

### **Improve Existing Operations Before Unnecessary Replacement**

Many organizations operate valuable machinery and systems that have become unreliable, inefficient or difficult to maintain.

Sanota assesses whether existing assets can be improved through:

- Mechanical restoration
- Electrical repairs and rewiring
- Controller replacement
- Sensor and instrumentation upgrades
- PLC and HMI integration
- Automation improvements
- Safety-system upgrades
- Software and monitoring integration
- Energy and performance optimization
- Operator and maintenance training

This approach can extend equipment life, improve reliability and reduce the cost and disruption of complete replacement.

**Button:** Request a Modernization Assessment

## **8. AMC and Industry Lifecycle Support**

### **Keep Critical Systems Operating Reliably**

Sanota provides Annual Maintenance Contracts and technical support for Sanota-built machinery, automation and integrated systems.

We can also support eligible third-party equipment following an initial technical and condition assessment.

AMC programmes may cover:

- Machinery and processing equipment
- Electrical panels and control systems
- PLCs, HMIs and industrial drives
- Sensors and instrumentation
- Conveyors and material-handling systems
- Agricultural and environmental controls
- IoT devices and monitoring platforms
- Software and operational dashboards
- Integrated production and processing systems

Each AMC is developed according to the equipment, operating environment, criticality and support requirements of the customer.

**Button:** Request an AMC Assessment

## **9. A Partner for Established and Emerging Industries**

Sanota works with organizations at different stages of development, including:

- Established industrial companies
- Small and medium enterprises
- Export-oriented manufacturers
- Agricultural enterprises
- Tea estates and factories
- Food processors
- Government and public-sector organizations
- Universities and research institutions
- Inventors and startups
- International technology and business partners

Whether the requirement involves a complete new system, an individual machine, an automation upgrade, a digital platform or ongoing technical support, Sanota can help develop an appropriate path forward.

## **10.Call to Action**

### **What Does Your Industry Need to Improve?**

Your requirement may begin with a production challenge, inefficient process, outdated machine, monitoring need, maintenance problem or new product idea.

Tell us about the operation and what you need to achieve. Sanota will review the requirement and connect you with the appropriate engineering and technology capabilities.

**Primary Button:** Discuss Your Requirement

**Secondary Button:** Request a Technical Consultation

### **Additional Enquiry Options:**

- Request an Industrial Assessment
- Request a Modernization Assessment
- Request an AMC Assessment

- Request Product Information
