2. Hero Section

Integrated Engineering for Evolving Industries

Sanota designs, develops, automates, modernizes and maintains machinery, products, processes and operational systems for industries in Sri Lanka and international markets. By bringing together engineering, automation, IoT and software, we transform operational challenges into practical, reliable and scalable solutions.

3. What Sanota Does

From Operational Challenge to Engineered Solution

Every successful solution begins with a clear understanding of the operational requirement. Customers approach Sanota with production challenges, outdated machinery, automation requirements, product ideas, monitoring needs and opportunities to improve existing operations. We assess the requirement and bring together the appropriate engineering and technology capabilities to develop a practical solution.

Design

We design machinery, products, control systems and integrated engineering solutions around specific operational requirements.

Develop

We turn concepts and technical requirements into prototypes, special-purpose equipment and working systems.

Automate

We improve machinery and processes through PLCs, HMIs, sensors, drives, motion control and industrial automation.

Connect

We integrate machinery and operational systems with IoT, cloud platforms, dashboards, tracking and software.

Modernize

We restore, retrofit and upgrade existing machinery to improve performance, reliability, safety and operating life.

Maintain

We provide Annual Maintenance Contracts, preventive maintenance, technical support and lifecycle services for Sanota-built and eligible third-party systems.

4. Industries We Support

Engineering Support Across Industries

Sanota supports organizations across diverse industries by helping them improve productivity, process control, reliability, operational visibility, resource efficiency and long-term performance.

Manufacturing & Industrial Automation

Custom machinery, production automation, testing systems, machine monitoring, process integration and modernization of existing industrial equipment.

Link: [Explore Manufacturing Solutions](#)

Smart Agriculture & Agri-Technology

Greenhouse systems, irrigation, fertigation, hydroponics, aquaponics, environmental control and intelligent crop-monitoring solutions.

Link: [Explore Smart Agriculture](#)

Food & Beverage Processing

Processing equipment and integrated systems supporting washing, preparation, drying, preservation, cooking, handling, packaging and value addition.

Link: [Explore Food-Processing Solutions](#)

Tea Industry Solutions

Tea-processing machinery, withering systems, dryers, rollers, environmental control, factory modernization and digital plantation-management solutions.

Link: [Explore Tea Industry Solutions](#)

Additional Industries

Sanota also provides engineering and technology solutions for:

- Logistics, warehousing and material handling
- Energy and resource efficiency
- Environmental and waste management
- Infrastructure and smart facilities
- Healthcare and biomedical engineering
- Research, innovation and custom product development

5. Products and Systems

Developed Around Real Operational Requirements

Sanota develops standard, configurable and custom-engineered products and systems for specific industrial and operational applications.

Our products are supported by engineering consultation, customization, installation, commissioning, training, maintenance and technical support.

Industrial Machinery & Automation

Custom machinery, machine-control systems, production automation, testing equipment and special-purpose industrial solutions.

Food-Processing Equipment

Dryers, shredders, processing lines, thermal systems, incubation equipment and food-waste processing solutions.

Tea-Processing Systems

Withering equipment, tea rollers, green and black tea dryers, mini tea-factory systems and specialty tea-processing machinery.

Smart Agriculture Systems

Greenhouse automation, fertigation, irrigation, environmental monitoring, plant-management and controlled-cultivation systems.

IoT, Tracking & Digital Platforms

Asset tracking, machine monitoring, inspection platforms, smart weighing, dashboards, alerts and remote operational control.

Material-Handling Systems

Automated guided vehicles, conveyors, unloading systems, asset visibility and customized internal-logistics solutions.

6. Why Work With Sanota

One Partner. Connected Engineering Capability.

Sanota goes beyond supplying individual machines or isolated technologies. We work with customers to understand the complete operational requirement and develop a coordinated solution.

Integrated Expertise

Mechanical engineering, electrical and electronic systems, industrial automation, IoT and software are combined through one connected delivery approach.

Practical Engineering

Every solution is developed around actual operating conditions, implementation requirements, available resources and long-term usability.

Custom Development

When a suitable standard solution is unavailable, Sanota can design and develop machinery, products and systems around the customer's specific requirement.

Modernization Before Replacement

We assess whether existing machinery can be restored, retrofitted or automated before recommending unnecessary replacement.

End-to-End Project Delivery

Sanota can manage engineering design, procurement, fabrication, software development, assembly, installation, system integration, testing, commissioning and handover.

Lifecycle Support

Our responsibility can continue after commissioning through preventive maintenance, Annual Maintenance Contracts, technical support, training, upgrades and performance improvement.

7. Featured Projects

Engineering in Action

Our projects demonstrate how mechanical engineering, automation, electronics, IoT and software can be combined to solve real operational challenges.

Industrial Machine Modernization

Sanota restored and automated an ageing jar-seal cutting machine by rebuilding its mechanical and electronic systems and replacing the obsolete control system. The upgraded machine achieved a reported threefold increase in production capacity.

Link: [View Modernization Project](#)

Smart Greenhouse Monitoring & Fertigation

An integrated agriculture system combining environmental sensors, automated irrigation and nutrient dosing with web and mobile monitoring for greater operational visibility and resource control.

Link: [View Smart Agriculture Project](#)

Tea Withering Control

An IoT-enabled monitoring and control system developed to manage temperature, humidity, airflow and louver operation during the tea-withering process.

Link: [View Tea Industry Project](#)

RFID Trolley Tracking

A connected tracking platform developed to improve the real-time visibility, movement history and utilization of trolleys within factory and warehouse environments.

Link: [View Tracking Project](#)

Custom Industrial Testing

A purpose-built stopper-testing system combining mechanical design, controlled torque application, PC-based visualization and historical test-data management.

8. How Sanota Works

A Clear Path from Requirement to Results

1. Discuss

Tell us about the operational challenge, technical requirement, product idea or improvement opportunity.

2. Assess

Our team studies the process, machinery, operating environment, limitations and expected outcomes.

3. Design

We develop the engineering concept, system architecture, scope and implementation approach.

4. Build & Integrate

Mechanical, electrical, automation and digital components are developed and brought together as one solution.

5. Install & Commission

The system is installed, integrated, tested and commissioned against the agreed operating requirements.

6. Support & Improve

We provide training, maintenance, AMC support, upgrades and further performance improvement as the customer's requirements evolve.

(Need to be creative here)

Button: [Start a Discussion](#)

9. Project Execution

From Approved Design to an Operating System

Sanota provides coordinated project execution to convert an approved engineering solution into a complete and operational system.

Depending on the project, our scope can include:

- Detailed engineering
- Equipment and component selection
- Procurement coordination
- Machinery fabrication and assembly
- Control-panel development
- PLC, HMI and software programming
- Factory testing
- Site installation

- Mechanical and electrical integration
- System commissioning
- Performance testing
- Operator training
- Documentation and final handover

This coordinated approach gives customers one accountable engineering partner throughout the project.

Button: Plan Your Engineering Project

10.AMC and Lifecycle Support

Keep Your Systems Operating Reliably

Sanota provides Annual Maintenance Contracts and technical support for machinery, automation and integrated systems developed by Sanota.

We can also take responsibility for eligible third-party machinery and systems following an initial technical assessment.

AMC Support May Include

- Asset inspection and condition assessment
- Preventive-maintenance planning
- Scheduled mechanical and electrical servicing
- PLC, HMI, drive and control-system support
- Sensor and instrument checks
- Calibration and functional testing
- Breakdown diagnosis and corrective support
- Control-program and system backups
- Spare-parts planning
- Maintenance and asset-health reports
- Safety and performance observations
- Retrofit and upgrade recommendations
- Operator and maintenance-team training

AMC scope, service frequency and response arrangements are developed according to the equipment, operating environment and criticality of the customer's assets.

11.Sanota and Knoweb

Engineering Connected by Digital Technology

Sanota's integrated engineering capability is supported by Knoweb, an affiliated information technology company under common ownership.

Knoweb contributes specialist expertise in software development, IoT connectivity, cloud platforms, web and mobile applications, dashboards, enterprise systems and data management.

Through this relationship, Sanota can connect physical machinery, sensors and control systems with digital platforms that improve visibility, traceability, reporting and remote access.

12. Corporate Proof

Experience That Supports Practical Delivery

Established in 2010

Engineering and technology experience developed across changing industrial requirements.

1,250+ Client Engagements

Experience supporting organizations through products, projects, services and technical requirements.

Multi-Industry Capability

Engineering exposure across manufacturing, agriculture, food processing, tea, logistics, energy, environment, infrastructure and healthcare.

End-to-End System Capability

Support from assessment and design through development, commissioning, AMC and long-term improvement.

13. Innovation and Collaboration

Developing Solutions Through Partnership

Sanota works with businesses, inventors, universities, research institutions and technology partners to develop solutions for specialized and emerging requirements.

Our collaborative capability can support:

- Engineering feasibility
- Concept development
- Prototype design
- Mechanical and electronic engineering
- Embedded and control systems
- IoT and software integration
- Testing and design improvement
- Pilot production
- Product-development support
- Commercialization planning

Whether the requirement begins as an operational problem, research concept or product idea, Sanota can help create a practical pathway toward implementation.

Button: Explore a Collaboration

14. Final Call to Action

Have an Operational Challenge or Engineering Requirement?

Whether you need to develop a new system, automate a process, modernize existing machinery, introduce connected monitoring, improve an operation or arrange an Annual Maintenance Contract, Sanota can help identify a practical way forward.

Tell us what you need to achieve. Our team will review your requirement and connect you with the appropriate engineering support.
